EDUCATION

Chitkara University

Bachelor of Engineering in Computer Science and Engineering, CGPA: 8.6

Rajpura, Punjab

Expected May 2028

EXPERIENCE

Software Developer

June 2025 – Present

Moksh Digital

Chandigarh, India

- Engineered and shipped **2 production-ready client projects** end-to-end — from requirement gathering to live deployment within defined timelines and client budgets.
- Built **Livique**, a full-stack e-commerce platform with product listings, cart, and checkout flows using **Next.js**, **Node.js**, and **PostgreSQL**; implemented responsive UI and RESTful APIs consumed by the frontend.
- Developed a custom **school website** with dynamic content management, responsive design, and a Node.js backend, delivered within client-defined timeline and budget.
- Owned complete **SDLC** — gathered client requirements, architected database schemas, built and tested APIs, deployed to production, and resolved post-launch feedback iteratively.

PROJECTS

Forge | Go, React, TypeScript, PostgreSQL, Docker, Kubernetes, Helm, Terraform, AWS services, CI/CD

- Built a Kubernetes-native deployment platform inspired by Render/Railway to deploy and manage containerized applications on AWS EKS.
- Automated application provisioning using **Helm charts** and **Terraform**, enabling one-click deployment of real Docker images with dedicated Kubernetes resources, RBAC, and Service Accounts.
- Designed and benchmarked a **gRPC-based microservice architecture**, sustaining **1,000+ HTTP requests/sec** and **4,000+ database-backed gRPC requests/sec** on a single service instance using **k6** and **ghz**; optimized PostgreSQL connection pooling to improve throughput and reduce p99 latency under production-like concurrent workloads.
- Set up **Grafana** dashboards backed by a local **Prometheus** instance to monitor service-level metrics, writing and validating custom PromQL queries for latency, throughput, and error-rate observability.

Veil | Go, OverlayFS, Linux VFS, inotify, Cobra, GitHub Actions

- Built a Linux-native workspace orchestration tool utilizing **OverlayFS**, **copy-on-write semantics**, and the **Virtual Filesystem (VFS)** to compose isolated development environments.
- Architected a modular service layer for OverlayFS mount orchestration, workspace lifecycle management, metadata-driven reconstruction, and streamed filesystem synchronization.
- Integrated **inotify**-based recursive filesystem monitoring to observe workspace state transitions and support event-driven developer workflows.
- Automated multi-platform release pipelines through GitHub Actions, generating distributable binaries and installation scripts for Linux and Windows.

FahRide | Next.js, Node.js, MongoDB, REST APIs

- Built a production-oriented university carpooling platform serving over 200+ students with scalable ride management workflows.
- Developed responsive user interfaces and optimized full-stack communication between frontend and backend services.

Chanakya AI | Full Stack • LangChain • Pinecone • RAG • Semantic Search

- Built an AI-powered legal assistant supporting multilingual legal query processing and contextual retrieval.
- Integrated LangChain and Pinecone to implement Retrieval-Augmented Generation (RAG) pipelines.

ACHIEVEMENTS

Hackathon Wins (3×)

- Formula Hacks 2025** — Built a customizable car engine interactive simulation.
- Hacknexus 1.0** — Built an AI-powered multilingual legal assistant using RAG pipelines.
- Bharat Techx 2.0** — Built an interactive education platform.

Finalist / Semi-Finalist

- NIT Jalandhar National Hackathon** — Top 4 out of 1000+ teams nationwide.
- Hack the Vault 2.0** — Finalist.
- Build With AI (Google)** — Semifinalist.
- Hack n Win 2.0** — finalist; won \$300 MongoDB credits.
- Rapid Code (UI UX)** — Winner

TECHNICAL SKILLS

Languages: Go, JavaScript, Java, SQL (PostgreSQL), C++, C, Bash

Frameworks & Libraries: React, Next.js, Node.js, Express, Cobra, gRPC

Monitoring: Grafana, Loki, Prometheus, OpenTelemetry

DevOps & Tools: Docker, Kubernetes, Helm, Terraform, AWS Services, GitHub Actions, Git, Linux, Jira, System Design, OS

Databases: PostgreSQL, MongoDB, Redis
